

Benefits of the Abel Assist Wireless Medicube Medical Alarm

The Abel Assist Wireless Medicube Medical Alarm is an exciting new option for those of you who are looking for an alternative to the Standard Medical Alarm that sends a signal via your telephone line.

As with other medical alarms you have a *wireless pendant* that sends your signal to your main alarm unit, but with your Abel Assist Wireless Alarm the main alarm unit itself also sends a *wireless signal* to the trained staff at our 24 hour Response Station.

Your Alarm unit has a battery back up in case of power loss and it *silently sends a test signal 6 times a day* including unit battery and pendant battery strengths.

Abel Assist Wireless Medical Alarms are Work and Income approved so you may be able to apply for funding for this alarm.

➤ **Easy Installation**

Installation is not limited by access to phone jacks, so the alarm can be *installed in any room* where there is a power point, even in an internal garage.

➤ **Less Cords and Plugs**

Our Wireless Alarm *only needs a power point*, so saves having all those cluttered messy phone cords. Less cords also means less for you to trip on so makes our Wireless Alarm a *safer option* as well. There are also *no annoying beeps or flashing lights*.

➤ **Works Completely Independent of Telephone Lines**

This Alarm does not use a telephone line to send its signal.

It works through a *wireless network*. If you accidentally leave **your phone off the hook** or the **battery in your cordless phone needs charging**; if the **telephone lines are down** or even if your **phone has been cut off for non payment of your account**, your Wireless Medical Alarm will still send for help.

It also works in conjunction with the **Vodafone Home Phone Wireless Plans**.

➤ **Will not affect Internet**

Because our Wireless Alarm does not use phone lines, it will not affect your Dial-up or Broadband Internet nor is your alarm affected by your Internet connection.

➤ **Quicker**

The wireless communication is very fast. *Within 1-2 seconds* of you pushing your emergency button, our 24-hour response service has received your call for help and *responds quickly*.

If you repeatedly push your button, the *phone line will not become tied up by signals* from your alarm, therefore it will not affect the response from our trained staff.

Medicube Medical Alarm. The Alarm that talks when your phone line won't
